Document Check / Presenter Guide

FraudShield classroom case pack ? Built from the existing transaction scenario and its four customer records.

What to show

Import **document_check_cases.csv** from Data intake as Financial transactions. Open each case, run the investigation, then use the Evidence tab to show the receipt, extracted invoice details, and the document check result.

Case	Case record	Document evidence	What the check should show
C-DOC-101	Maya Chen ? $1,840.00	INV-6001 ? $1,840.00	Clear; no document risk indicators
C-DOC-102	Luis Ortega ? $2,275.50	INV-6002 ? $2,875.50	Printed amount differs by $600.00
C-DOC-103	Priya Shah ? $3,190.00	INV-7003 ? $3,190.00	Invoice also filed on C-DOC-104
C-DOC-104	Maya Chen ? $1,295.75	INV-7003 ? $3,190.00	Repeated invoice plus amount mismatch

Suggested walkthrough

1. Clear check: Open C-DOC-101 and point out that a checked document with no mismatch is labeled Clear.

2. Amount comparison: Open C-DOC-102 and compare the case amount ($2,275.50) with the printed receipt amount ($2,875.50).

3. Cross-case pattern: Compare C-DOC-103 and C-DOC-104. Both carry invoice INV-7003, so the dossier identifies a repeated invoice; C-DOC-104 also differs from its recorded amount.

4. Explain the limits: These are fictional classroom records designed to exercise the evidence workflow. A flag is an investigation lead, not proof of fraud.

Files in this pack

document_check_cases.csv ? four case-linked receipt PDFs in evidence/ ? OCR-ready images registered in the repository document manifest.
